

Woollett Bridge, Painshill, Surrey

CLIENT: Painshill Park Estate

LOCATION: Surrey, UK

YEAR OF COMPLETION: 2022

Woollett Bridge provides access to an island with exhibits on the circuitous route for visitors in the 18th Century Landscape of Painshill Park in Surrey.

The bridge was originally designed and constructed in structural timber, to span over water onto the island, and is set within an area adjacent to the River Mole.

We were appointed by Painshill Park Trust to carry out an inspection and assessment of the bridge. The initial inspection was to provide advice on repair and rehabilitation.

Inspection was undertaken over water, with detailed records made of the connections and abutment supports.

KEY FACTS:

- Inspection
- Assessment
- Structural timber
- Spanning over water
